

Here is an idea that you might find useful and innovative in your work.

Noodle Factory is an EdTech platform that has been **developed by educators, for educators**. The founders of Noodle Factory were trying to solve their own problem: how to scale educators and allow them to be 'superhuman' by automating and offloading the many non-teaching tasks that get in between educators and their students.

The Noodle Factory Solution

- Provide contextualised AI tutoring and AI marking
- Instant, AI-powered automated setup
- Provide students with instant feedback

Reduce Your Workload

Automate time-consuming (but very important) tasks like

- Tutoring
- Quizzes & Assessments
- Marking
- Exam prep

Start by simply dragging and dropping course content (e.g., textbooks, course notes, journal articles) into the platform so that Natural Language Processing algorithms can automate the process of generating a knowledge base.

Engage in New Ways

Quickly and easily harness the power of AI to deliver personalised learning to students.

Using a chat/messaging interface (e.g., Microsoft Teams, WebEx), students receive instant, personalised feedback and tutoring, through interactive dialogue, without the need for educators to be directly involved in the process.

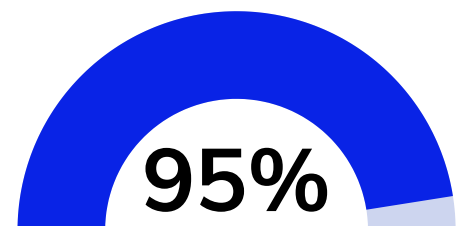

Assess in a variety of question types, including open-ended or paragraph answers, to make learning more meaningful.

So far, we have received reports from institutions and educators saying that they have reduced time spent on non-teaching tasks in half. **That 50% time savings adds up to hundreds of hours per year for each educator.**

Explore how the Noodle Factory platform has been deployed in institutions just like yours
